Re: Confirmed Rabies in Feral Cat in Sharpsburg

The Washington County Health Department has confirmed rabies in a black and white short-haired feral cat located in the vicinity of Dustin Drive, Sharpsburg, MD.

There are known human exposures in the vicinity reported at this time. Exposure is defined as a bite, scratch, or contact of saliva or body fluids from an infected animal with a mucous membrane, for example, an eye.

Health Department personnel have contacted local residents in the vicinity of the incident to advise residents of the situation and urge caution when dealing with unknown animals. Please contact the Health Department if you live in the vicinity of Dustin Drive, Sharpsburg, MD and you have, or know of anyone who might have, any possible human or animal exposure at the numbers listed below.

Rabies is a viral disease that attacks the nervous system; it is predominantly seen in raccoons, bats, and skunks, as well as in dogs and cats (domestic animals).

Washington County residents are reminded that rabies has been well established in Maryland since 1983, and that all wild or unknown animals should be avoided whenever possible since the possibility of exposure to rabies can occur anywhere and anytime.

Pet owners should remember that the best protection for themselves, their families, and their pets is an up-to-date rabies vaccination of animals with which they come into routine contact.
